ULLMAN®

Ullman Devices has a history of over 80 years of manufacturing a quality line of professional specialty hand tools. Robert Ullman invented the first inspection mirror while watching an aircraft mechanic use a crude mirror to view the inner workings of an engine. From that point on, Ullman Devices has expanded to include magnetic pick-up tools, flexible spring claws, screw starters, rotating magnetic work lights, carbide scribers, hooks, picks, socket holders and various other specialty tools.

The innovation did not stop there. The Ullman team has since invested in more cutting edge electronic inspection products that allow you to see and reach things that you never could before.
